automated stealthy boat densely packed with weapons, Special Forces submersibles and unmanned vehicles. The design explores the potential of emerging technologies to allow innovative arrangements which enhance overall operational capabilities.

Columbia-class submarine - Wikipedia

The submarine, never built, would have been smaller than other subs and a mothership to drones. The design—let's call it "Sub 2000"—was much flatter and organic in appearance. The sail was much shorter and blended into the length of the hull, which had a flattened bottom. Unlike the current t-shaped tail fins of U.S. Navy subs, Sub 2000 had an "x" shape not unlike Japan's Soryu -class diesel electric attack submarines.

Even today, building a submarine is still far removed from the design processes we know from the automotive engineering-scene. Partly on one hand, this is owing to the high number of integrated systems and parts and on the other hand because of the low numbers of boats ordered by a customer. The ...
