but scarce may mislead us in modern conditions of material abundance. Such phenomena as obesity, financial bubbles, hoarding, and shopping sprees suggest a mismatch between our instinct to consume and our current environment.

Consuming Instinct

The consuming instinct, then, can be studied under the lens of evolutionary psychology (EP), which is a theoretical framework that proposes that the human mind evolved by the same Darwinian forces that shaped all animals. The human brain is simply another product of the dual evolutionary processes called natural selection and sexual selection.

But The Consuming Instinct is practical, insightful and useful for innovators. This is because it helps make innovation more commercially viable; rather than focus on a niche needs for a particular ‘type’ of consumer, The Consuming Instinct helps us focus instead on innovation opportunities that will have universal appeal because they appeal to our universal human nature.
